

Are you a road haulier who needs to drop off and/or pick up a container at Uniport?

From 29 October 2018 submit your pre-notification via Portbase!

In order to serve you even better in the future, Uniport is implementing a new Terminal Operating System. Are you a road haulier who needs to drop off and/or pick up a container at Uniport? **If so, pre-notify your visit and the container via Portbase!** This will apply to all visits **effective from 07:00 on 29 October 2018**. From that date on, it will no longer be possible to submit pre-notifications via the Uniport website.

How it works

You can use the service Hinterland Container Notification (through either an internet or system interface) to submit pre-notifications via Portbase. Once you have submitted a pre-notification, you will automatically receive status information on your visit and container. This allows you to optimally plan each visit and shorten your overall processing time on the terminal.

Pre-notify your Customs documents via Portbase as well

Are you a road haulier and are you also responsible for submitting proper Customs documents to Uniport? From 29 October 2018, you will always do so via Portbase, using the services Notification Import Documentation and Notification Export Documentation. It will no longer be possible to submit these via the Uniport website.

be smart.
get connected.
